Surf Without Fear, for AntiSpy™ - a New Spyware Killer is Here.

Fire once and eliminate Spyware threats across an entire network.

Palm Harbor, Florida – The need has never been greater for tools that effectively detect and remove spyware/adware threats. AntiSpy™, the latest release from Tech Assist, Inc. is designed to do just that. No more worry about websites hijacking users browsers or implanting stealth applets on a users PC. AntiSpy™ finds and removes spying and advert-displaying pop-up generators from infected PC's.

AntiSpy™ has the capability to disinfect an unlimited number of PC's over a network, therefore making it the perfect tool for small, medium and large businesses that wish to maintain a safe environment and ensure increased security over their enterprise, with minimal effort on the part of system administrators. AntiSpy™ is also an ideal solution for government agencies, hospitals, educational facilities, etc., with a need to protect extremely sensitive data from being hijacked and ending up in wrong hands.

AntiSpy™ seamlessly integrates into our Enterprise Manager™ Suite, to provide a turnkey solution that will add a new level of security, not to mention piece of mind for system administrators, no matter how large the network. Requiring very little processor power, it runs virtually un-noticed in the background, so it won't degrade system performance while it does it's work.

Detection methods employed by AntiSpy™ ensure a high level of protection without incorrectly blocking non-threatening web-based content, or false positives. AntiSpy™ also uses an auto-update method similar to anti-virus software to ensure the spyware definitions are always up to date without any user interaction. With the built in "spywatch" feature, AntiSpy™ detects incoming threats *BEFORE* they make it to their destination and cause any damage. Just fire once and forget about it. AntiSpy™ will be on guard to keep your systems safe.

While AntiSpy™ is packed with advanced features not found in similar products, it remains easy to setup and configure with an intuitive interface that makes it ideal for use by everyone, regardless of their level of computer experience.

Users can now surf safely knowing that AntiSpy™ is the only spyware protection they'll ever need.
