# Email SecurityNET™

The **Email SecurityNET™** Global Gateway acts as a potent shield for small, medium and large companies who are being inundated with spam, viruses and other email-based threats.

Spam and virus identification updates occur across the Email SecurityNET™ global network every 10 minutes, ensuring 99% spam accuracy and 0.00001% false positives.

With a managed Spam Filter, one small change to the client company's MX record allows the **Email SecurityNET™** to filter 100% of incoming mail for Spam and viruses.

This powerful email security solution is scalable and fully redundant with no additional user maintenance - it is truly a 'set-and-forget' system that provides you with state-of-the-art email security in minutes.

**Email SecurityNET™**

is part of the SecurityNet suite of network security managed services. Please call or visit our web-site for more information.

## How The SecurityNET™ Global Gateway Works

### Spam and Virus Filter

**Stop Spam and Viruses before they even come close to your Network.**

The spam and virus filters automatically eliminate 99.9 percent of spam and virus contamination from each users mailbox, protecting workers from nuisances like popups, and disasters, such as corrupted systems.

The network receives virus and spam definition updates every 10 minutes.

### Attachment and Content Filter

The **content filter** gives administrators the ability to block messages based on words or phrases found in the message subject as well as in the message body

The **attachment filter** rejects messages with certain types of file attachments before they enter your messaging infrastructure. This feature insures potentially destructive files, such as ".vbs", ".scr", ".exe", etc. do not gain access to the user's network.

### Policy Filter

The policy filter allows administrators to block messages based on message size as well as number of recipients. Messages with policy violations are sent to quarantine for administrative review.

### Quarantines

**Safely route Spam and filtered mail to E-mail SecurityNET™ Quarantines.**

Administrators and users can harness the power of the **E-mail SecurityNET™** secure quarantine called the Spamtank. It is safely and securely accessed from the web at: [www.spamtank.com](http://www.spamtank.com) so anyone can review and/or choose to have previously blocked emails delivered at any time. An automatic "Add to Whitelist" link is also available for each message inside the Spamtank.
